

TABLE OF CONTENTS

	Personnel	vi
	Publications and Reports	ix
	Introduction	xiii
I.	Physical Electronics	1
	Electron Emission Problems	1
	Redetermination of the Crystallographic Variation of Electron Field Emission from Tungsten	1
	Growth of Single Crystals of Tantalum	2
	Energy Dependence of Electron-Produced Poisoning of Oxide Cathodes	2
	Experimental Studies	3
	Infrared Radiation Pyrometer	3
	Cleanup and Diffusion of Helium in Ionization Gauges	5
	Ionization-Gauge Control Circuit	6
II.	Microwave Gaseous Discharges	8
	High-Density Microwave Gaseous Discharges	8
	Microwave Breakdown in Hydrogen at High Pressures	11
	Plasma Oscillations	12
	Hyperfine Structure in Positronium	12
III.	Solid State Physics	15
	Microwave Study of Semiconductors	15
IV.	Low Temperature Physics	17
	Summary of Research Program	17
	The Viscosity of Liquid Helium	20
	Measurements of Second-Sound Pulse Amplitudes in Liquid Helium II	21
	Ultrasonic Propagation in Magnetically Cooled Helium	22
	Thermoelectric Power of Magnesium	25
	Measurement of the Thermodynamic Equation of State of Paramagnetic Salts	26
V.	Microwave Spectroscopy	28
	Microwave Spectrum of Oxygen	28
	Conduction Electron Resonance in Metals	28
	Paramagnetic Resonance Study of Ammonium Chrome Alum	29
VI.	Magnet Laboratory Research	30
	Magneto-Optic Studies of Hg ¹⁹⁶ and Hg ¹⁹⁷	30
	Nuclear Magnetic Resonance in Gases	32
	Stepwise Excitation of Mercury	32
VII.	Microwave Tube Research	33
	Noise Reduction by Means of a Lossy Beam Transformer	33

	Noise-Reduction Systems	35
	Examination of Assumptions Implied in Predicted Minimum Noise Figure for Traveling-Wave Tubes	37
	Noise in Electron Beams	40
	Large-Signal Measurements	44
	Coupling of Two Concentric Helices	47
VIII.	Atomic Beam Research	50
	Hyperfine Structure of Cesium Radioisotopes	50
IX.	Multipath Transmission	51
	Narrow-Band Limiting	51
	FM Transient Response of a Bandpass Filter	51
X.	Information Theory	54
	Error Proof Coding	54
XI.	Statistical Communication Theory	55
	Second-Order Correlation	55
	Effects of Periodic Sampling on Output Noise in Autocorrelation Detection	55
XII.	Transistor Circuits	60
	Voltage-Regulated Supply	60
	Transistor Time Modulator	62
XIII.	Semiconductor Noise	64
	Problems in the Measurement of Noise Amplitude Probabilities	64
	Noise and Channel Effect in P-N Junctions	64
	Modulation Noise in Semiconductor Devices	65
	Noise Analyzer	65
XIV.	Microwave Components	68
	Ferrites at Microwave Frequencies	68
	T-Ridge Waveguides	68
XV.	Speech Analysis	71
	Investigation of Consonants	71
XVI.	Mechanical Translation	74
XVII.	Communications Biophysics	75
	Probability Model for Cortical Responses to Successive Auditory Clicks	75
	Masking and Variability of Neural Responses to Clicks	80
	Neural Latency Monitor	81
XVIII.	Analog Computer Research	83
	Analog Computer Development	83
	Cathode Ray Tube Multiplier	83
	Square-Law Multiplier	84
	Probability Multiplier	84
	High-Speed Analog Computer	84

	Solution of Simultaneous Equations on an Analog Computer	84
	Inverse Trigonometric Function Generator	85
	Diode Network Synthesis	85
	The Saturable Reactor in Analog Computers	88
	Applied Network Theory	91
	Complex Frequency Plane Synthesizer	91
	Nomogram for a Butterworth Filter with Internal Loss	91
	Approximate Method for Frequency Time Domain Transformation	91
	Duality of Ideal Transformers	94
XIX.	Network Synthesis	96
	Synthesis of RC Networks in the Time Domain	96
XX.	Switching Control Systems	100
XXI.	Neurophysiology	108
