HOMEWORK #6 Daylight as a visual experience

Choose a space (inside a building, a place, a public area, a promenade, ...) for which you can describe a visual experience. This visual experience consists of a luminous path going from one luminous scene / atmosphere to the next.

You should describe that path through a sequence of 4 to 7 scenes according to the following sequence :

- Introduction to the subject: Attraction of the eye
- Spatial effect: Architecture shaping the space
- Performance: Function of the space revealed
- Transitions: Luminous dynamic in the path
- Conclude by a "happy ending"

Each of your 4 to 7 scenes should be supported by one or more pictures / drawings, and of a short description (no more than 15 lines) highlighting how it relates to the proposed sequence. Altogether, your luminous path should be presented on a 2 page document, including figures.
